

DATA • AI • SOFTWARE ENGINEER

Business-first technologist building data products, AI systems, and scalable automation.

Portfolio summary • Research-driven • Product-minded • Reproducible systems

What I bring

- End-to-end data and AI workflows from problem definition to production delivery
- Strong business understanding: analytics, customer behavior, reporting, and process optimization
- Technical depth in Python, SQL, ETL, predictive modeling, APIs, and AI integrations
- Portfolio evidence with clear business value, reproducible code, and measurable outcomes
- Ability to communicate across technical and non-technical stakeholders

Core capability stack

Problem → Data → Technology → Analysis → Solution → Business value

Built to show capability in production-minded analytics, ML, GenAI, and engineering efficiency.

Target: data/AI engineer roles with strong business impact and technical delivery focus.
